GenevaLogic Releases New Print-Limit Software for Schools

GenevaLogic Releases New Print-Limit Software for Schools

Print-Limit Helps Schools Track and Control Escalating Printing Costs

Madiswil, Switzerland and Portland, Oregon USA– September 16, 2005 - GenevaLogic, the world's leading provider of active teaching systems for the classroom, today announced the release of Print-Limit, an advanced solution to help schools manage and reduce the spiraling costs of printing. Print-Limit is the easy-to-use solution that keeps computer printing costs under control, providing centralized management for all network printers and users. Print-Limit lets administrators define the number of allowed pages and types of printing for individuals and groups, keeps track of costs and usage, and allows users to manage their accounts.

As computer and technology usage expands throughout education, associated printing costs are also rising. Print-Limit's features allow schools to first understand how their printers are being utilized and then apply effective measures to automatically manage that usage in a cost efficient manner.

"It's not unusual for a high school of 1,200 students to run through almost half a million pages of printing per year at a cost exceeding \$25,000," said Kirk Greiner, president, GenevaLogic US. "With Print-Limit, schools can eliminate wasteful printing and achieve cost savings of between 30% and 50%. In the example mentioned above, that translates into a savings of \$7,500 to \$12,500 per year."

Print-Limit installs in minutes on a Windows print server, automatically captures user and group information from the network domain, and can be administered using the built-in Web tools from any workstation on the network.

The English language version of Print-Limit is available immediately. Additional languages will be available in the future.

Depending on the existing printer installations schools can choose between a user-based or server-based licensing model. Thanks to this flexible licensing Print-Limit will be an affordable option for every school. Businesses can purchase server-based licenses that allow management of an unlimited number of printers and users from each licensed print server. Either license includes one year upgrade protection at no additional charge.

A 30-day evaluation copy of the software is available at www.genevalogic.com.

About GenevaLogic

Founded in Madiswil, Switzerland in 1996, GenevaLogic has grown from a small four-person start-up to one of the worlds leading developers of educational management tools. Since that humble beginning, GenevaLogic has expanded to a global organization co-headquartered in Switzerland and Portland, Oregon with over 40 employees worldwide.

Today, GenevaLogic is an international enterprise, supporting more than 10,000 customers in over 30 countries worldwide. GenevaLogic is the creator of Active Teaching Systems and is a recognized leader in educational software tools and utilities that enable educators to optimise, manage and control the use of technology for instruction. Additional information about GenevaLogic is available at www.genevalogic.com.
